

## Klever Neo Intelligent System Protection (ISP)

### Product Specification

The next generation in the growing dynasty of SMART Control Boxes by KLEVER. The Klever Neo is a confident evolution of mechatronic technology: its slim, low-profile housing facilitating total freedom in design, featuring an integrated, highly sensitive collision detection system. Renowned European quality and design, this revolutionary product represents the best value all-in-one Control Box on the market today.

## Connect. Detect. Protect.

We put protection on the table. Every workspace is different. The rapid development of office ergonomics means that it's highly likely that the next desk you sit at will be an adjustable one. Yet movement comes with risks: You might not see, you might not know, or you might not have time to look. The solution? The Klever Light Barrier systems, such as the one found in the Klever Neo, are built into the control box itself. The system recognises even the slightest obstruction, which in turn stops the table from moving further towards the hazard. Better still, our “drive back” function reverses the table a short distance after the collision is detected, giving you time and space to remove the obstacle.

## Features

- Powerful user Anti-Collision protection
- Pre-integrated into the system, end users gain effective protection for minimal extra outlay.
- Light barrier systems are even more effective than gyroscope-centered competitors.
- More effective in recognizing system changes and, mitigating system damage.
- Light barrier system is the sophisticated technological solution for the demands of the modern workplace.

Designed in Germany

Powerful Anti-Collision  
Protection System

20 Year Warranty

C Tick Tested to AU/NZ  
electrical standards.
