

# Klever Desk<sup>™</sup> Flush Mount Handset (Upgrade)

## Operating Instructions

Designed in Europe, but built for corporate New Zealand workplaces, Klever Desk™ hand control complements the function with its four-digit display, and space for up to two saved memory positions.

## Initial Setup Procedure & Manual Reset

### **A** CAUTION

#### Risk of minor or moderate injury through crushing.

Collision Detection (ISP) is inactive during start-up and reset processes. This may lead to minor or moderate injury through crushing. Ensure that no persons or objects are in the table's range of motion.

#### **NOTICE**

Operating the table system when it is not properly connected can damage the product.

- Ensure all Cables are properly connected
- Ensure that all required Actuators are ready to be operated
- Do not operate the Table System until it is properly connected

The Position Reset Procedure is used to align the position of the Actuators within the Table System. You must perform a Position Reset Procedure before using the SMARTneo-2G for the first time.

It is possible to perform a Position Reset Procedure with all types of compatible User Interface. However, this section describes performing a Position Reset Procedure for Table Systems controlled by a Hand Control with an UP Key and DOWN Key (Comfort or Basic Hand Controls).

If your SMARTneo-2G is operated by a different User Interface, consult that product's operating Manual for instructions on performing a Position Reset Procedure.

~	1.	Press and hold the <b>DOWN Key</b> until the table stops at the lower position limit	
	2.	Release the <b>DOWN Key</b>	
~	3.	Press and hold the <b>DOWN Key</b> again > The table will move down slightly, then up again	
	4.	Release the <b>DOWN Key</b> > The Position Reset Procedure is complete.	

#### INFO

If your SMARTneo-2G has been parameterised with additional stopping points (e.g. a Container Stop Position), repeat Step 3 until the table has moved upwards again.

## Adjusting the Table Top Height

### **A** CAUTION

Risk of minor or moderate injury through crushing Your fingers may be crushed when you attempt to change the height of the table.

- Keep fingers away from moving parts
- Ensure that no persons or objects are in the table's range of motion

#### **INFO**

The Table Top will move up or down until the UP or DOWN Key is released, or if a predefined stopping point has been reached.

### To move the Table Top UP:

Press and hold the **UP Key** until the desired height has been reached

### To move the Table Top DOWN:

•

Press and hold the **DOWN Key** until the desired height has been reached

## Saving a Memory Position

This function saves a set Table Top position. One Memory Position can be saved per Memory Position Key.

<b>A v</b>	1.	Move the table to the desired height	
73		> The display shows the Table Top height (e.g. 73 cm)	
☐ SAVE	2.	Press the SAVE Key.	
2	3.	Press the Memory Position Key (e.g. 2)	
5 2		The display shows S 2 > After about two seconds, the Table Top height is displayed again	

# Adjusting the Table to a Memory Position

2	1.	Press and hold the required Memory Position Key (e.g. 2).  > The Table Top will move until the saved Table Top height has been reached. If you release the Key before the Memory Position is reached, the table will stop.	
ן 3	2.	2. Release the Memory Position Key > The display shows the Table Top height (e.g. 73 cm)	

## Factory Reset

12 🔺	Press and hold the following Keys for 3 seconds:  • Memory Position Keys 1 and 2  • UP Key
5 4	The display shows S and a number (e.g. S 4)
<b>~</b>	Press the <b>DOWN Key</b> until the display shows S 0.
5 0	The display shows S 0.
SAVE	Press the <b>SAVE Key.</b> The SMARTneo-2G has now been reset to its factory settings. It is now in the same state as it was during the first start-up.

### Note - E70 will be displayed:

- \*Then power off and on control box from mains
- \* Display will show 000
- \*Then follow initial setup procedure

## Container and Shelf Stop Positions

These features can limit the movement area of the Table Top (if e.g. a container is below the table or a shelf is above it). Container Stop Positions become the new lowest end position, Shelf Stop Positions the highest.

#### **INFO**

Container Stop Positions can only be saved in the lower half of the movement area, Shelf Stop Positions in the upper half. You must set each position separately.

### To Save a Container Stop or Shelf Stop Position:

<b>A Y</b>	1.	Press the <b>UP or DOWN Key</b> to move the Table Top to the desired position.
Press and hold the SAVE Key for 10 seconds.  > The Container Stop / Shelf Stop Position is saved (Cormovement area, Shelf Stop if you are in the top half).		> The Container Stop / Shelf Stop Position is saved (Container Stop if you are in the bottom half of the

### To Delete a Container or Shelf Stop Position:

<b>* *</b>	1.	Press the <b>UP or DOWN Key</b> to move the Table Top to the top half (to delete a Shelf Stop Position) or bottom half (Container Stop Position) of the movement area.
SAVE 2. > The Container Stop / Shelf Stop Position		Press and hold the <b>SAVE Key</b> for 10 seconds.  > The Container Stop / Shelf Stop Position is deleted (Container Stop if you are in the bottom half of the movement area, Shelf Stop if you are in the top half).

# Error Messages on Display

When a comfort hand control is installed, error messages are displayed on the digital panel.

Signal	Message	Required Actions
HOT The display shows "Hot".	Overheating protection has been activated. Duty cycle possibly exceed.	Wait for the overheated components to cool.
The display shows an error number.	An internal error has occurred.	Read the table below to find the correct response to the error code shown.

Code	Message	Required Actions
E00	Internal Error Channel 1	Disconnect the Control Box from the Mains. Contact KLEVER for further information.
E01	Internal Error Channel 2	Disconnect the Control Box from the Mains. Contact KLEVER for further information.
E12	Defect Channel 1	Disconnect the Control Box from the Mains. Fix the external short circuit. Ensure all cables are connected correctly. Reconnect the system, then operate as normal.
E13	Defect Channel 2	Disconnect the Control Box from the Mains. Fix the external short circuit. Ensure all cables are connected correctly. Reconnect the system, then operate as normal.
E24	Over current Motor M1	Check that nothing is blocking the table's range of movement. Remove excess load from the table. Contact KLEVER for further information.
E25	Over current Motor M2	Check that nothing is blocking the table's range of movement. Remove excess load from the table. Contact KLEVER for further information.
E48	Over current Motor Group	Check that nothing is blocking the table's range of movement. Remove excess load from the table. Contact KLEVER for further information.
E36	Plug detected in M1	Plug in the correct motor. Ensure all cables are connected correctly. Perform a Factory Reset. Perform a Position Reset Procedure.
E37	Plug detected in M2	Plug in the correct motor. Ensure all cables are connected correctly. Perform a Factory Reset. Perform a Position Reset Procedure.
E55	Sync Error, Motor Group	Remove excess load from the table. Perform a Factory Reset. Contact KLEVER.
E62	Stop due to power output control	Check that nothing is blocking the table's range of movement. Remove excess load from the table. Contact KLEVER for further information.
E60	ISP Activated	Release all Keys and wait for the Drive Back function to be completed.
E61	Motor Replaced	Plug in the correct motor. Ensure all cables are connected correctly. Perform a Factory Reset. Perform a Position Reset Procedure.
E65	Over current while driving	Check that nothing is blocking the table's range of movement. Remove excess load from the table. Contact KLEVER for further information.

E67	High Voltage Detected	Disconnect the Control Box from the Mains. Contact KLEVER for further information.
E70	Motor Configuration Changed	Disconnect the Control Box from the Mains. Connect the Actuators in the desired setup. Perform a Factory Reset. Perform a Position Reset Procedure. Read Chapter 9, "Actuator Setup", for advice on changing Actuator types.
E71	Collision Sensor Defective	Perform a Factory Reset. Contact KLEVER if the problem persists.
E72	Position Error (Middle Switch*)	Disconnect the Control Box from the Mains. Wait for at least 20 seconds. Reconnect and perform a Position Reset Procedure.
E73	Middle Switch* Defective	Disconnect the Control Box from the Mains. Contact KLEVER for further information.
E81	Internal Error	Disconnect the Control Box from the Mains. Restart and per-form a Factory Reset.  Contact KLEVER for further information if the problem persists.
E90		
E91	Cascading error (slave)	Check all connections. Attempt a Position Reset Procedure. If this is not possible, disconnect all Control Boxes from the Mains and try again. Contact KLEVER for further information if the problem persists.
E91		information if the problem persists.
E93	Connection Error During Cascading	Check all connections. Attempt a Position Reset Procedure. If this is not possible, disconnect all Control Boxes from the Mains and try again. Contact KLEVER for further information if the problem persists.

### NOTICE

Do not operate the table system if problems persist. Contact KLEVER for further information.

### NOTICE

The Middle Switch is only fitted to certain versions of the SMARTneo-2G. Contact KLEVER if you are unsure which version you have.
